

This document contains 5 pages, separated by 4 different flavors of page-breaks.

Test Check :

On the generated PDF, the position of every "This is page #..." frame must be identical on all pages. The "pagebreak" SHALL NOT disturb the position of elements.

All page-breaks are invisible on print jobs. For "wysiwyg" purpose, some are visible in the browser. Here are the 4 different flavors:

- `invisible` [between pages #1 and #2]
- `visible` [between pages #2 and #3]
- `visible` + `margin-left` (label in the left side) [between pages #3 and #4]
- `visible` + `margin-left` (label in the right side) [between pages #4 and #5]

This is page #1.

To insert an invisible pagebreak, use the following HTML code :

```
<div class="pagebreak"></div>
```

(You cannot see this invisible one from your browser)

This is page #2.

To insert an visible pagebreak, use the following HTML code :

```
<div class="pagebreak visible"></div>
```

This is page #3.

To insert an visible pagebreak, with text in the left margin, use the following HTML code :

```
<div class="pagebreak visible margin-left"></div>
```

This is page #4.

To insert an visible pagebreak, with text in the right margin, use the following HTML code :

```
<div class="pagebreak visible margin-right"></div>
```

This is page #5.
